The small burster with a high work capacity.

**Don't think that just because you have small printer outputs that it doesn't make sense to use automatic forms processing.**

Manual forms handling is a thing of the past for HEFTER Systemform customers. The solution to efficient manual forms handling is finally here – the M 3000 and M 3010 bursters:

**Margin trimming  
+ Bursting  
+ Stacking of individual sets / sheets**

**...In one step!**

In addition, the appearance of your forms will be improved because the margin trimmer will leave clean-cut edges on your forms.

The features found on the M 3000 and M 3010 used to only be found on expensive machines. Now, these machines operate economically, even when you are only processing small quantities.

No matter what size your company is, HEFTER bursters are ideal machines for starting up your own automatic forms handling business, or for decentralized operations, such as branch offices.

**Now, two bursters that can offer more!**

The M 3000 and M 3010 bursters are without a doubt leaders in their class. The remarkable features include:

- A user-friendly control panel.

- Electronic length setting  
M 3000: 4"-14" M 3010: 3"-12".
- Tractor feed for accurate paper transport.
- Individually adjustable margin cutters make changing form sizes a breeze.
- Automatic jam clearance.
- Quick-stop button with restart memory.
- Fast, quiet, and capable of processing up to 3,000 11"-forms per hour.
- Jam control and automatic "paper-out" control.
- Easy relocation because the machine is mounted on casters.
- Paper tray and waste basket.

Due to the patented burster principle created by HEFTER, you are guaranteed that two-up forms will be bursted perfectly every time. This means that an 11"-form with a 3" check attachment (14" in total) will be bursted perfectly each time a new form needs to be separated.

**The M 3010 has the following additional features:**

- Automatic paper jam control in the stacker.
- Sheet-by-sheet stacking that is specially designed for small form lengths. This option can come with or without margin trimming.

Various other options increase the flexibility of the HEFTER Systemform bursters family line.
